Zebra BI visuals for Power BI

Build actionable financial and sales reports with the extremely powerful and intuitive Power BI visuals

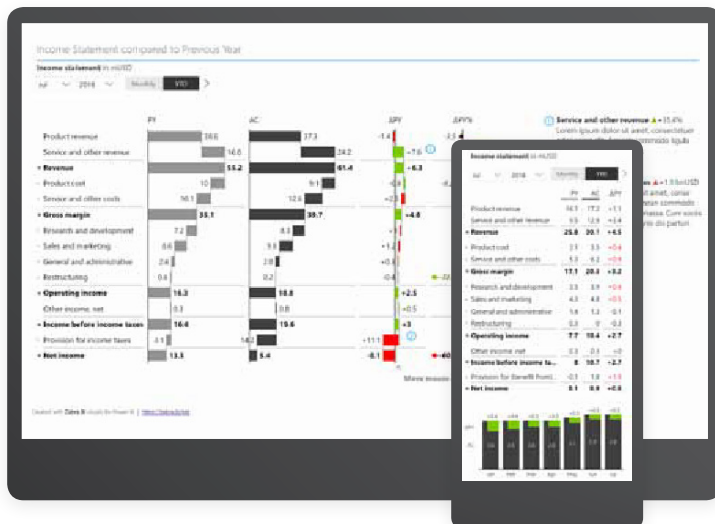

PBI Certified

Zebra BI is a **Microsoft-certified add-in** for Power BI, empowering users to get deeper insight into their data and create standardized and impactful dashboards that meet the **IBCS®** guidelines.

Developed in close collaboration with the Power BI community and based on years of expertise in data visualization, this add-in makes it possible to establish best practice reports in minutes. Limited training, programming, or formulas are required. Combining easy to use charts and tables, Zebra BI visuals for Power BI empower analysts with state-of-the-art data visualization methods.

- Deeper Insights
- Complex Analysis in A Few Clicks
- Report Consistency
- Easily Customizable
- Advanced Charts & Tables
- Fully Responsive

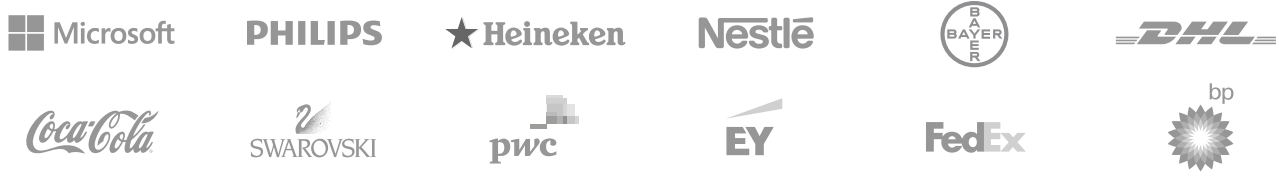

"Zebra BI visuals are helping us get to insights faster. The simplicity of the presentation allows me to see immediately what our team needs to do. The charts tell me a clear visual story of which country or product is behind the change in our performance."

Peter Rostas
Director Product Marketing,
Microsoft Surface

Zebra BI Charts

Zebra BI Charts visual renders waterfall, variance, column, area, line, dot, lollipop, 'hills&valleys', and many other types of charts. You can easily create combination (combo) charts and above all, create **small multiples** of any chart type.

Pixel-perfect, fully responsive charts that automatically calculate PY, plan or forecast variances, YoY growth rates, and totals will vastly simplify your underlying data model while making your reports and dashboards utterly understandable and actionable.

Zebra BI Tables

Build extremely flexible tables with embedded charts and features such as expand and collapse rows, reorder columns, do a P&L calculation, top N analysis, and much more.

The visual automatically calculates absolute and relative variances, saving you weeks in developing advanced reports. It works perfectly for sales variance reporting, financial statements, cost breakdowns, and more.

Sales vs Plan			
	AC	PL	ΔPL ▼
▼ Wholesale	3,207	2,864	+344
> UK	1,478	1,331	+147
> CAN	607	503	+104
> US	1,122	1,029	+93
▼ Retail	5,720	5,705	+16
> UK	2,115	1,933	+182
> CAN	1,340	1,242	+98
☑ US	2,265	2,530	-264
Dairy	177	166	+11
Cosmetics	414	415	-1
Home décor	888	894	-7
Beverages	145	251	-106
Books	641	803	-162

If I didn't see it, I wouldn't believe it!

Licensing

Licensing model for Power BI visuals is based on the number of end-users within the company who are engaging with the Power BI reports using Zebra BI. End-users include report creators/designers and the viewers of the reports as well. The easiest way to determine how many licenses a company needs is to estimate how many employees within the company could potentially engage with Power BI reports using Zebra BI visuals.

Security & Data Protection

Zebra BI technology has been officially certified by Microsoft as part of a rigorous review process. This process assesses several functional and technical aspects of the architecture, security, source code compliance, and other areas. Zebra BI solutions are therefore fully compliant with Microsoft security, provisioning, and other technical standards and adhere to Microsoft requirements for enterprise deployment.

Best practice reporting with advanced visuals made super easy.
